- Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EGGP) - http://www.edgp.bhi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector pBeloBACII.

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPG1-98 and was constructed by partial EcoxI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2, or by the same strain used for the BDGP's pi and BST libraries. A more detailed describino of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1400 CGGGTGCGGGTGGAGGTGAGCGTCGATAAGCAGCGGGTTTGGGTAAAGCCCATGTTGATG 1459

/note="This library represents the unique genes found in
the fifth round of EST sequencing at Stanford University
for the maize genome project. Sequences are present from
library 946. Contigs were assembled using ZmDBAssembler
and 2 representatives from each contig were selected for
the Unigene set. All singlets were also selected."

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Title:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       υ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             O
```

```
The present invention relates to DNA encoding variants of protein with loop region and six hydrophobic helixes which facilitates excretion of L-lyshine and/or L-arginine to outside of cell of a methanol assimilating bacterium when introduced into the bacterium. The method is used for encoding a protein which facilitates excretion of L-lyshine, L-arginine or

The present invention relates to the isolation of novel Corynebacterium glutamicum genes encoding metabolic pathway (MP) proteins (AMU71863-AAU71922). The metabolic pathway proteins of the invention include enzymes involved in the lyshine and methionine biosynthetic pathways. The polywucleotide sequences of the invention can be used for the large-scale production and/or modulation of expression of fine chemicals such a lyshine and methionine. The sequences of the invention may be used to identify C. glutamicum and related organisms e.g. C. diptheriation in a subject to detect diptheria. AASS9673-AASS96132 represent C. glutamicum apenes encoding the novel metabolic pathway proteins of the invention
                                                                                                                                                                                                                                                                                           Metabolic pathway protein; MP; lysine biosynthesis pathway;

LysG and LysE encode a lysine transport regulatory protein and an export protein, respectively. Microbial production of amino acids (A) is improved by increasing the export-carrier activity and/or the export gene expression in a microorganism that produces (A). The method is specifically used to increase production of lysine, used as an animal feed additive. Other (A) are variously useful as pharmaceuticals, condiments and intermediates for fine chemicals. This method increases the amount of (A) secreted into the culture medium. Export of (A) has been found to depend on a single gene. NB. This sequence has been created from the information given in table 2 of the
                      improving export carrier activity or corresponding gene expression, also new export and regulatory genes from Corynebacterium.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               361 GCGGTGGCCACTGACACGCGCAACCGGGTGCGGGTGGAGGTGAGCGTCGATAAGCAGCGG
